

How to apply for Flustix Recycled

You are a manufacturer of plastic recyclates? Or: You are using recyclates in your production process? A few steps lead to the Flustix Recycled certification!

Would you like to label your products or raw materials with the Flustix Recycled trustmark? In contrast to our plastic-free certification, there is no laboratory analysis necessary. Instead, an audit takes place in the production facility or in the companies relevant for the supply chain. This is carried out by our certification partner DIN CERTCO. First, please complete the [online request for an offer](#) for the Recycled certification.

Next, you will receive an individual offer to audit your manufacturing processes. This is provided on the basis of the [certification program](#) "Products made of recycled material according to DIN EN ISO 14021 DIN EN 15343".

Flustix Recycled Certification offers you a unique opportunity to stand out from competitors through accredited testing. We look forward to hear from you!
